EXAMINER'S AMENDMENT

 An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Warren Zitlau on January 14, 2009.

The application has been amended as follows:

IN THE CLAIMS:

43. A method for detecting an analyte with an immunoliposome-nucleic acid amplification assay comprising:

encapsulating 50 to 1,000 identical nucleic acid segments within closed shell liposomal bilayers, incorporating receptors into the outer surface of said liposomal bilayers; and exposing the receptors to a target analyte, causing aggregation of the receptors within the plane of the liposomal bilayer, wherein the aggregation causes the liposomal bilayers to become unstable leading to spontaneous rupture of the liposomal bilayers, and release of the nucleic acid segments.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: The claims are drawn to a detection assay method for detecting extremely small quantities of compounds for which specific receptors exist. The receptors are coupled to the outer surface of a membrane bilayer (liposome) which contain 50-1000 copies of short DNA or RNA segments. These segments of nucleic acid serve as amplification substrates, i.e. tags or labels. When the liposome (to which a receptor for a specific compound coupled) is added to the sample if the specific compound is present in the sample the liposome will be bound to the compound via its receptor. The non-bound liposomes are washed away and the

Application/Control Number: 10/759,099

Art Unit: 1637

bound liposomes are disrupted releasing the amplification substrates (the nucleic acids) into the sample milieu where they are amplified and subsequently detected by standard nucleic acid detection methods. The closest prior art is Singh et al. and Wu et al. The declaration submitted on September 3, 2008 is found to be persuasive in view of the amendments to the claims.

With respect to claim 17, this claim is consistent with being able to detect these compounds because these compounds are known and receptors for their detection exist and are also known.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
